

Sandy (Yu Hsuan) Yang

Pittsburgh, PA | sandyy@andrew.cmu.edu | (412) 510-6451 | linkedin.com/in/sandy-yang-538b12193/ | github.com/s21dyY

EDUCATION

Carnegie Mellon University

Master's, Information Systems Management, Business Intelligence and Data Analytics. GPA: 3.9.

December 2026

University of Washington

Bachelor of Science (BS), Applied Mathematics. GPA: 3.67.

June 2021

EXPERIENCE

Software Engineer Intern

June 2026 – August 2026

SLB (Schlumberger)

Sugar Land, TX

- Developed end-to-end automation software for the Reservoir Performance Team, streamlining test planning and reporting
- Automated a 16-hour VV planning workflow, targeting a 50% reduction in processing time and 0.4 FTE in engineering labor savings
- Integrated a locally hosted LLM (Ollama) into the backend to generate structured VV plans and engineering reports
- Designed configuration-driven architecture to improve scalability and maintainability across future products
- Built automated document-generation workflows to transform engineering requirements and product configurations into standardized test plans, schedules, and reports

Data Analyst

February 2023 – October 2024

WTW

Taipei, Taiwan

- Built end-to-end data pipelines to support monthly retraining of attrition prediction models
- Optimized ETL workflows in partnership with data engineers, reducing operational costs by \$2K per month
- Built Power BI dashboards tracking attrition and compensation benchmarks, reducing reporting time by 2 hours per week
- Synthesized market and social media analytics into actionable insights to support client strategy and decision-making

Data Analyst

December 2021 – December 2022

Pengo Technology Inc

Taipei, Taiwan

- Developed ETL pipelines to ingest REST API data into SQL databases, enabling reliable downstream reporting
- Built Power BI dashboards to track conversion rates and funnel drop-offs, enabling PMs to prioritize features
- Designed and analyzed A/B experiments to evaluate feature performance and inform product prioritization
- Automated reporting workflows, reducing manual work by 10 hours per week

PROJECTS

Corporate Startup Lab: Refrigerant Leak Detection

January 2026 – April 2026

Data Scientist

- Built and trained ML models in Python to detect refrigerant leaks, achieving 80% classification accuracy
- Reduced false positives to 10%, improving detection reliability and minimizing unnecessary maintenance interventions
- Engineered features and tuned models across sensor and equipment datasets to optimize predictive performance
- Collaborated with cross-functional teams to validate model outputs and support early leak detection

What to Eat Today

October 2025 – December 2025

Full Stack Engineer

- Built a full-stack AI-powered web application using React and Next.js, enabling users to manage pantry ingredients and receive personalized meal recommendations
- Integrated Groq's LPU inference API to dynamically generate recipes based on users' available ingredients

SKILLS

Languages & Libraries: Python, SQL, R, Java, JavaScript, TypeScript, MATLAB

Frameworks & Tools: React, Next.js, RESTful APIs, Hadoop, Power BI, Git

Data & ML: ETL, Data Pipelines, Feature Engineering, Classification Modeling, Machine Learning, Predictive Modeling, A/B Testing, Data Visualization

AI & Automation: LLM Integration, Ollama, Groq LPU Inference API, Workflow Automation

Languages: Chinese
